

Nada Abdullah – Participant in the UP Course – WIT-Hadhramout - Yemen

Nada Abdullah heard about the program from her friends who studied at the Social Association for development . Nada is a 22 years old university student. She is studying in the Arabic Literature faculty Education. Nada is living with her parents, who encouraged her to take the course when she was interested to join it .

Nada is not the only one who had interest in computers , her brother owns a computer center where he teaches computer skills to others . When Nada joined this course , her concern was to learn about what she doesn't know . And she says that knowing how to use computers is a very important thing to keep in track with the rest of the world . Where everything now , such as being a student or an employee , even locally makes computer skills a must to have .

Her goal in her life is to build up a strong personality that can give in every perspective and serve the community . She hopes that through this program she can develop her skills and gain more self confidence.

What may be will be an obstacle in her way to achieve her goals is that she is not able to work in any environment , she should work in a female environment . But for now the WIT forum is considered to be a very good chance to practice what we have learnt in the UP course and the PD workshops . This way it's easier to gain the experience . and have the ability to serve .

My role model is not a lady in fact he is my brother , What I admire about him that he is independent and ambitious. Nada says " *There are things of course changing from generation to another , my mom didn't have to know any thing about computer but now I do , my daughter too will have to deal with stuff I didn't have to know anything about them now* "
